## **WHAT ARE REDDIT UPVOTES?**

Reddit is a social media platform that works as a forum where people can share their thoughts in communities and get liked or disliked. There are communities on Reddit called subreddits, where people gather around a topic and share their posts within the rules of the community.

Reddit upvotes play a vital role in your popularity on Reddit. After you share a post on a subreddit, Redditors will upvote or downvote your post. The more people upvote your posts, the more audience you'll have. Having many upvotes will increase your karma as well, which is your overall score on Reddit.

## HOW DO UPVOTES WORK?

Reddit upvotes can be considered the heart of Reddit. The main goal of Reddit is to share ideas with people, spread the word with as many as you can, and vote for them based on people's preferences.

Getting upvotes to your posts will benefit you in many ways. First of all, receiving upvotes will help you reach popularity easily. By clicking on the arrow up, Redditors can upvote your post and get you engagement. High engagement means your posts are valuable, so more people will eventually vote for you.

You can think of Reddit upvotes as likes and shares on other social media platforms. However, in this context, it's possible to get downvotes as well. Don't think of downvotes as something terrible. Having downvotes along with upvotes is pretty natural as it's impossible to get everyone's attention and likes around an idea.
